DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/26/04 has been entered.

Response to Arguments

2. Applicant's arguments with respect to claims 1-2, and 17 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

3. Claim 19 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 19 depends on claim 17 and resulting not further limit the subject matter.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 1, 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Okinaka (4,349,411).

As to claims 1 and 18, Okinaka disclose a composition for etching copper comprising an aqueous solution of an oxidizing agent, wherein the oxidizing agent is monopersulfate such as potassium hydrogen peroxomonosulfate (KHSO_5) and a complexing agent such as glycine (amino acetic acid), which is a derivative of acetic acid and broadly reads on the claimed generic form of acetic acid (col.1, lines 65-68 and col.2, lines 34-45 and lines 53-col.3, line 3).

Okinaka fails to disclose the exact concentration of the oxidizing agent such as the monopersulfate compound.

However, Okinaka discloses that the concentration of the oxidizing agent is in the range of 0.001 to 0.01 molar (equates up to 1.52%) and higher concentration may be used (col. 2, lines 45-49).

Therefore, it would have been obvious to one of ordinary skill in the art at the time of claimed invention would have been motivated to optimize the concentration to an optimum value for increasing the etching rate at a desired value.

Okinaka teaches that complexing agent is used to prevent precipitation of copper ions in the solution in order to maintain the etching solution in active form during the etching process (col.2, lines 31-33).

Therefore, it would have been obvious that the etching solution will etch the copper at approximately uniform rate during the etching process because the etching activity of the solution is maintained by introducing the complexing agent as taught by Okinaka.

As to claims 17 and 19, Okinawa's composition is capable of selectively etching copper.
